## PROFESSIONAL SUMMARY

My name is Chikaodi Agorua, a technology consultant and software developer with a strong foundation in enterprise web systems, SQL database management, and process automation. I specialize in bridging the gap between business requirements and technical execution, combining deep analytical problem-solving with hands-on full-stack engineering expertise to deliver impactful IT business solutions.

## EXPERIENCE

### Ernst & Young

March 2025 - January 2026

*Technology Consultant / Software Developer*

- **Bridged Business & Technology:** Partnered directly with corporate stakeholders to gather, analyze, and translate complex operational needs into technical specifications and user stories for cross-functional engineering teams.
- **Full-Stack Development & Schema Design:** Engineered robust backend web services using NestJS and C# (.NET Core) alongside responsive, mobile-first frontends in Angular. Formulated backend database schemas using SQL to maintain enterprise data persistence.
- **Agile Requirements Lifecycle:** Championed Agile Scrum practices, actively managing the product backlog, participating in sprint planning, and writing clear acceptance criteria to align engineering sprints with core business objectives.
- **Technical Solutioning & Documentation:** Authored comprehensive technical proposals, functional requirements documents (FRDs), and system maintenance manuals to streamline cross-departmental operations.
- **Quality Assurance & Testing:** Executed multi-tier testing protocols, including unit testing, integration testing, and regression analysis, ensuring application deployments completely mirrored the client's original business rules.

### EXPERIENCE (CONTINUED)

**Peak Harmony**  
*Smart Contract Developer*

July 2024 - Feb 2025

- Created smart contracts for Decentralized Applications (DApps) with expertise in python and solidity.
- Worked on backend architecture of DApps using Python
- Initiated permissioned L1 blockchain using Hyperledger Besu.
- Utilized ERC-20 protocol for the creation of native currency.
- Created Private networks using QBFT.

**Lexis Development Company Ltd.**  
*Mobile App Developer & Solutions Architect*

October 2024 - February 2025

- Business-to-Technical Translation: Evaluated strategic client business goals and translated them into functional, high-performance, cross-platform mobile solutions utilizing React Native for iOS and Android.
- End-to-End Product Lifecycle: Managed the complete mobile product lifecycle from requirements gathering through database design to final deployment, ensuring strict adherence to user-centric UI/UX best practices.
- Integration & State Management: Implemented data-rich RESTful APIs to connect client-side mobile applications with Node.js (TypeScript) backend services, managing data validation, session states, and secure user inputs.
- Incident Management & Refactoring: Scrutinized existing application logic to resolve bugs, optimize rendering performance, and scale database interactions based on direct user feedback cycles.

**Ecobank Nigeria Limited**  
*Web Developer / Solutions Analyst*

July 2024 - November 2024

- Requirements Elicitation & Process Mapping: Facilitated discovery sessions with internal banking units to gather, document, and model business requirements for critical internal web application workflows.
- API Design & Systems Integration: Architected, documented, and deployed scalable backend RESTful APIs, mapping critical data pathways to seamlessly link legacy banking systems with modern frontend portals.

### EXPERIENCE (CONTINUED)

- **Product Strategy & Project Proposals:** Created and presented detailed technical project proposals to executive stakeholders, mapping how proposed software features directly resolved operational friction points and improved customer-service touchpoints.
- **Data Mapping & Transformation:** Handled data schema configurations and managed transaction-heavy workflows, utilizing SQL scripts to ensure correct data structures across high-scale enterprise systems.

**Ecobank Nigeria Limited**

*IT Service Management(intern)*

July 2023 - October 2023

- **Business Function Automation:** Concepted, built, and deployed an automated bot to streamline the bank's internal customer service review workflow, eliminating manual steps and accelerating reporting cycles.
- **Incident & Incident Management:** Handled service desk operations, triaging technical issues, tracking systemic software bugs, and routing tickets to specialized technical units to optimize internal resolution metrics.
- **Feedback Analytics:** Collected and analyzed weekly staff service performance reviews, transforming raw dataset feedback into actionable feature optimization ideas for the IT business solutions team.

### SKILLS

|                            |                                     |                                  |
|----------------------------|-------------------------------------|----------------------------------|
| • Teamwork                 | • Database: SQL                     | • Java(Spring-Boot)              |
| • Communication            | • System Implementation             | • Typescript(Nestjs)             |
| • Business Process Mapping | • Business Requirements Elicitation | • Python                         |
| • Problem Solving          | • Proficient in HTML and CSS        | • Advanced Excel (Data Analysis) |
| • Data Mapping             |                                     | • Database Schema Design         |

### EDUCATION

**Bachelor's in Science**

*Computer Science*

2020 - 2024

- Dissertaton in Blockchain Based Voting System
